

Redwood City Ferry Service – Project Update

- WETA recently selected a firm for design/engineering services for the Redwood City and Martinez ferry terminals; ferry services between San Francisco and these two waterfront cities are included in WETA's State Legislature approved development/operations plan to build/operate a regional transit system.
- This scope of work for the Redwood City ferry terminal involves:
 - Terminal design for both the marine (in water) and shore side facilities;
 - Marine engineering in support of terminal design and environmental review;
 - Structural and civil engineering;
 - Public outreach; and,
 - Permitting.
- The new, additional consulting firm will work in tandem with the consultant previously retained for the Redwood City ferry terminal Environmental Review process as the conceptual design and preliminary engineering is necessary to complete the environmental document for the project.
- These studies will be underway during 2011 and 2012.
